

## change mobile menu resolution

Posted by Wemessage - 06 Aug 2019 15:58

---

our menu is too large and should become mobile starting from 1200px..

have added following to custom style:

```
@media screen and (max-width: 1200px){  
  
  .header-style-3 .navigation-mobile-container {  
  
    display: block;  
  
    height: 50px;  
  
  }  
  
  .header-style-3 .main-megamenu {  
  
    display: none;  
  
  }  
  
}
```

but menu is empty seems some javascript must be invoked at this time to populate items.

also menu doesn't work with magento 2.3.2 had to rollback to 2.3.1
